

# helical scalp treatment

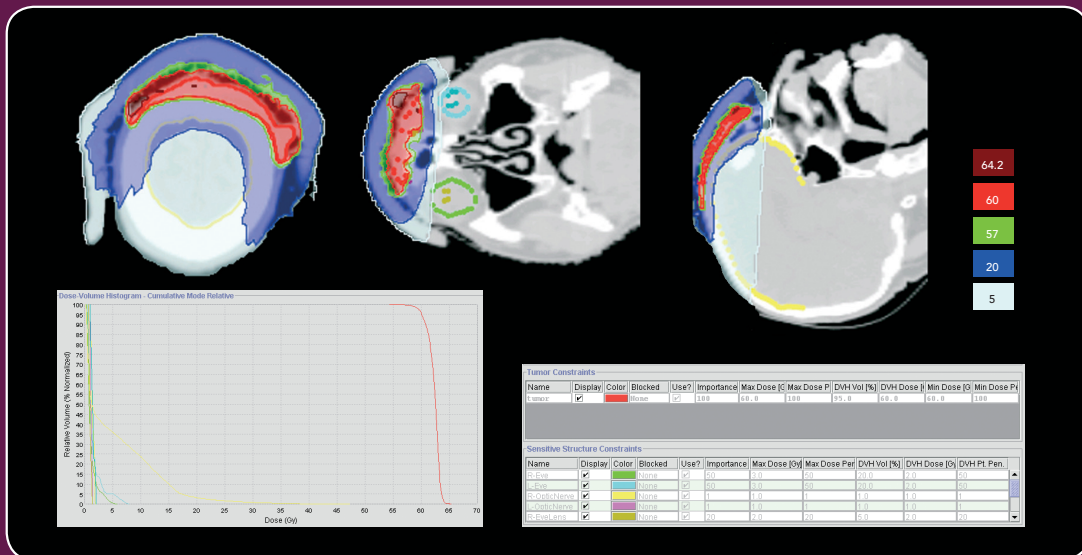

treat superficial lesions better than electrons

## Patient Before

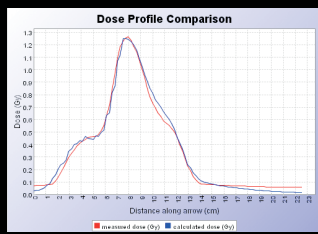

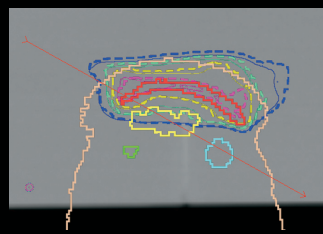

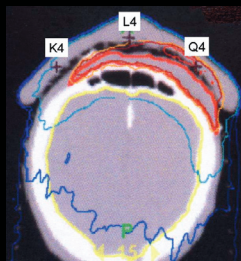

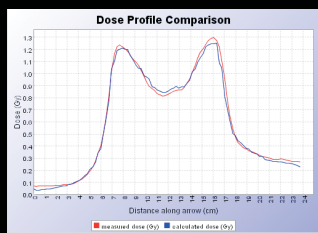

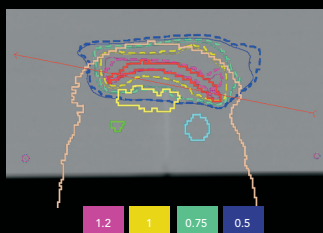

The patient was treated for skin cancer of the forehead. The prescribed dose: 2.0 Gy per fraction/60.0 Gy total.

## The Plan

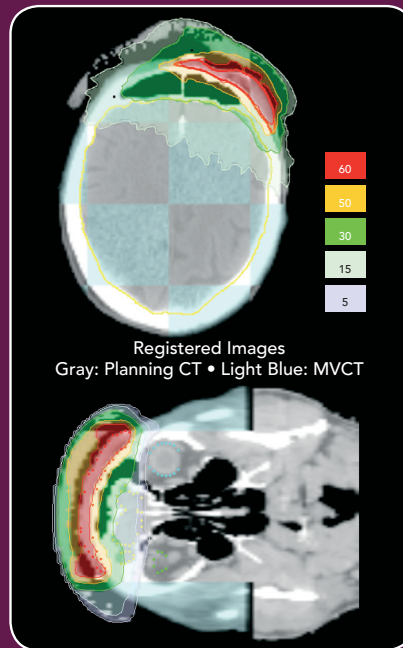

## Dose Quality Assurance

"An *in vivo* dosimetry measurement was made with three thermoluminescent dosimeters on the patient. The attached picture shows the approximate location of the TLDs. The measured dose per fraction is within 5% agreement based on the predicted dose."

- Paul Jursinic, Ph.D

## Patient Positioning

Froedtert Hospital & Medical College of Wisconsin

Milwaukee, Wisconsin

J Frank Wilson, MD, Allen Li, Ph.D, Paul Jursinic, Ph.D

## End of treatment

## 6 month follow-up
